

Micah LaSala | Full Stack Developer

Raleigh, NC | (919) 438-2091 | mlasala45@gmail.com | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Software engineer with strong experience in full-stack development and AWS cloud engineering, specializing in backend systems, infrastructure design, and automation. Proficient in building scalable applications with Angular, Spring, ASP.NET, Node.js, PostgreSQL, and AWS services, with an emphasis on reliability, performance, and maintainability. Demonstrated ability to independently manage technical projects, quickly adapt to business needs, and deliver high-quality solutions across the stack.

Technical Skills

Languages: C#, Java, Javascript, SQL, Python, Kotlin, Rust, HTML, CSS, C++

Frameworks: React, Angular, Spring, .NET, ASP.NET, NodeJS, React Native, TensorFlow

Cloud and Infrastructure: AWS, Azure, Terraform, Docker, CI/CD

Developer Tools: Jira, Git, Maven, Gradle, VSCode, IntelliJ, Visual Studio, Android Studio

Practices: Performance Optimization, REST APIs, MVC, Database Design, Security Planning

Work Experience

Full Stack Developer

NC State University

Aug 2025 - Present

- Design and implement cloud infrastructure solutions driving cost-efficient service deployment, secure networking, and streamlined data flows
- Independent technical lead for several major features, involving extensive design, documentation, and testing
- Develop full-stack features using Spring, Angular, and PostgreSQL
- Investigate and diagnose issues in AWS Cloudwatch, ECS, EC2, and RDS
- Proactively identify and investigate possible security vulnerabilities and opportunities to improve systems

Full Stack Engineer

Dabbell Inc

Mar 2025 - Jun 2025

- Major contributor to architectural and design decisions across the technology stack
- Designed and implemented features in React Native and NodeJS
- Configured interactions with various web services, including CI/CD, cloud storage, auth

Education

University of North Carolina at Charlotte, Charlotte, NC | May 2024 (3.20 GPA)

Bachelor of Computer Science | Concentration: Software, Systems, and Networks

- Software Engineering, Cloud Computing, High Performance Computing, Database Design and Implementation, Data Mining, Data Structures and Algorithms

Certificates

Microsoft AZ-900: Azure Fundamentals (Feb 2025)

Projects

RABapp (Centralized Inter-State Livestock Safety Database and Management Portal)

- **AWS, Spring, Angular, PostgreSQL, Python**
- Reorganized cloud infrastructure to reduce costs and improve maintainability
- Constructed an AWS-hosted pipeline to efficiently validate, transform, and stream raw data into a production PostgreSQL database
- Identified and remediated bottlenecks in core queries, resulting in an 80% reduction in runtime
- Developed integration testing infrastructure with JUnit and Testcontainers, enabling service-wide automated testing
- Created developer productivity tools to simplify common tasks and automate business requirements, including a robust aspect-oriented profiling utility
- Refactored underengineered APIs to improve readability, security, and maintainability

Async Procedural Geometry FFI Library (Polyspheres)

- **Rust, Tokio, ASP.NET, React, BabylonJS**
- Designed and implemented a Rust library that performantly generates high quality seamless geometry for procedural polygon-tiled spheres, using a novel algorithm.
- Created a well-documented, user-friendly API exposed through FFI, allowing developers to use the library in any programming language or environment.
- Provided extensive documentation and code examples, including an ASP.NET server and web visualizer.

Cross-Platform P2P Messaging App

- **React Native (Web, Paper, WebRTC)**
- Developed a peer-to-peer chat app to allow seamless text and file transfer directly between devices.
- Implemented WebRTC ICE Handshake supported by a minimalist signal server to minimize reliance on third-party servers during communication.

3D Exoplanets Data Visualizer

- **React, BabylonJS, PostgreSQL, NodeJS, WebGPU**
- Designed and built a web-based 3D visualizer for data from the NASA Exoplanets Archive.
- Optimized rendering performance to performantly display thousands of stars in-browser.
- Used an ETL workflow to process data from multiple sources into a usable format.

Full Stack Image Ranking SPA (UNCC Capstone)

- **React, ASP .NET, PostgreSQL, Azure, Kubernetes, MUI, Docker, Entity Framework**
- Self-directed research, design, and E2E development of a full-stack web application.
- Architected a scalable, containerized deployment environment using Azure Kubernetes Services.
